PROJECT SCOPE DOCUMENT

For the Development & Deployment of the

Website, Client Portal, Agent Portal & Admin Portal

Prepared following our meeting to confirm project scope and requirements

Submitted to:

Amura Insurance Agency

Attn: Mr. Paul, Director

CONFIDENTIAL – FOR EVALUATION PURPOSES ONLY

23 July 2026

Introduction

Following our meeting, this document summarizes the agreed scope of work for the Amura Insurance Agency digital platform. The project will be delivered in two phases: the corporate website first, followed by the Portal system (Client, Agent, and Admin), starting with Motor insurance — Comprehensive and Third Party Only (TPO) — as the first product line on the portal.

Please review each section below and confirm that it reflects your requirements. Where indicated, we also outline what we will need from Amura Insurance Agency's side to build and launch each component.

1. Website

A public-facing website to introduce Amura Insurance Agency, showcase products, and allow prospective clients to request quotes for select products online.

Pages

- Home
- About
- Services / Products
- Contact
- Get Quote

Get Quote

This page will host data-collection screens for each quotable product. Submitted details will be sent to Amura Insurance Agency's back office to generate a quote, which will then be emailed to the client.

Products available for online quote requests:

- Medical Insurance
- Professional Indemnity
- Travel Insurance
- Domestic Insurance

Note: Motor Insurance (TPO and Comprehensive) will not use the quote-request flow. Instead, these will redirect clients directly to the Client Portal for purchase.

Required from Amura Insurance Agency: The specific data fields to be collected from the client for each product/cover above, so that the back office can generate an accurate quote.

Required from Amura Insurance Agency: Company colours, logo, and photos for use across the website.

Required from Amura Insurance Agency: Written content for each page (optional — we can draft this, but please share it if you already have specific wording you'd like used).

2. Client Portal

A self-service portal where clients can register, purchase Motor cover, manage their policies, and raise claims.

- Client registration, sign-in, and forgot-password functionality.
- Personal dashboard for the client.
- Ability to purchase insurance on the portal, with the certificate generated by the system, emailed to the client, and available for download at any time.

- Ability to track covers and renew due vehicles.
- Automated notifications for upcoming due covers (sent 2–3 days before expiry).
- Ability to raise a claim, which is received by the back office for processing.

3. Agent Portal

A portal for Amura Insurance Agency's agents to manage their own clients, sell and renew cover, and track their commissions.

- Agents are registered by the back office and receive login credentials (email, password, and system URL).
- Agent dashboard.
- Visibility of commission earned from their sales, with the ability to withdraw commission (terms and process to be defined by Amura Insurance Agency).
- Ability to register their own clients, purchase cover for them, renew cover, and raise claims on their behalf. Certificates are sent to clients by the system, and agents can also download them within the portal.
- Ability to raise a claim, which is received by the back office for processing.

4. Admin Portal

A back-office control centre for Amura Insurance Agency staff to manage the entire system — agents, staff, covers, claims, insurers, and reporting.

- Admin login and forgot-password functionality.
- Register and manage Agents and Staff.
- View all covers purchased across the system.
- Purchase and renew covers on behalf of clients.
- Add new insurance companies and set rates against each product they offer.
- View all claims raised, for processing.
- View all requested quotes, generate quotes manually, and upload them — automatically sent to the client.
- Generate reports.

5. Requirements Needed from Amura Insurance Agency

To build the quoting and purchase logic, and to enable live cover issuance, we will need the following from Amura Insurance Agency:

- A comprehensive rate and premium calculation formula for each insurance company / underwriter you work with.
- A DMVIC membership number, OR API access to the insurance company/companies you work with for Motor cover.

On the API/DMVIC integration point: please inform the relevant insurer(s) that you have a system that needs to integrate with them for cover purchase. Where possible, we would appreciate a joint meeting with their technical team to clarify integration requirements.

Acceptance & Authorisation

By signing below, both parties confirm the scope set out in this document and authorise commencement of development, phased as agreed: the website first, followed by the Portal system starting with Motor (Comprehensive & TPO).
